TO,

The District Magistrate
Sheikhpura

DATE

11 October 2026

SUBJECT

Proposal for an AI-enabled Letter Routing, Tracking and Advisory System for the Office of the District Magistrate

Respected Sir,

With reference to the discussion held on the requirements of your office, Setuk Pvt. Ltd. is pleased to offer the services described in the enclosed proposal.

The proposed web-based system enables every letter received in the office to be uploaded, read and assigned to the competent officer, with an email dispatched along with a reference number and a prescribed time limit. Replies received against the reference number are mapped to the case. A reply stating that the work is complete is recorded as **Solved** and a reply stating that the work cannot be done, together with the reason, is recorded as an **Issue Reported by Department**. A case on which no reply is received within the time limit is shown as **SLA Failed**. The District Magistrate can view Solved cases, SLA Failed cases and Issues Reported on the dashboard. For the last two categories, the system places before the District Magistrate the options available for resolution and instances of how similar matters have been addressed elsewhere. All decisions remain with the District Magistrate and the officers of the office.

The enclosed document sets out the workflow, the features, the role-based access arrangements, the technology to be used, the storage requirements and the implementation schedule. The commercial terms will be furnished separately on finalisation of the scope.

We request that the proposal be considered and we shall be glad to furnish any clarification that your office may require.

Yours faithfully,

Rinku Kumar
Director, Setuk Pvt. Ltd.

ENCLOSURE

Project Proposal (Draft v2.0)
AI-Enabled Letter Routing, Tracking & Advisory System

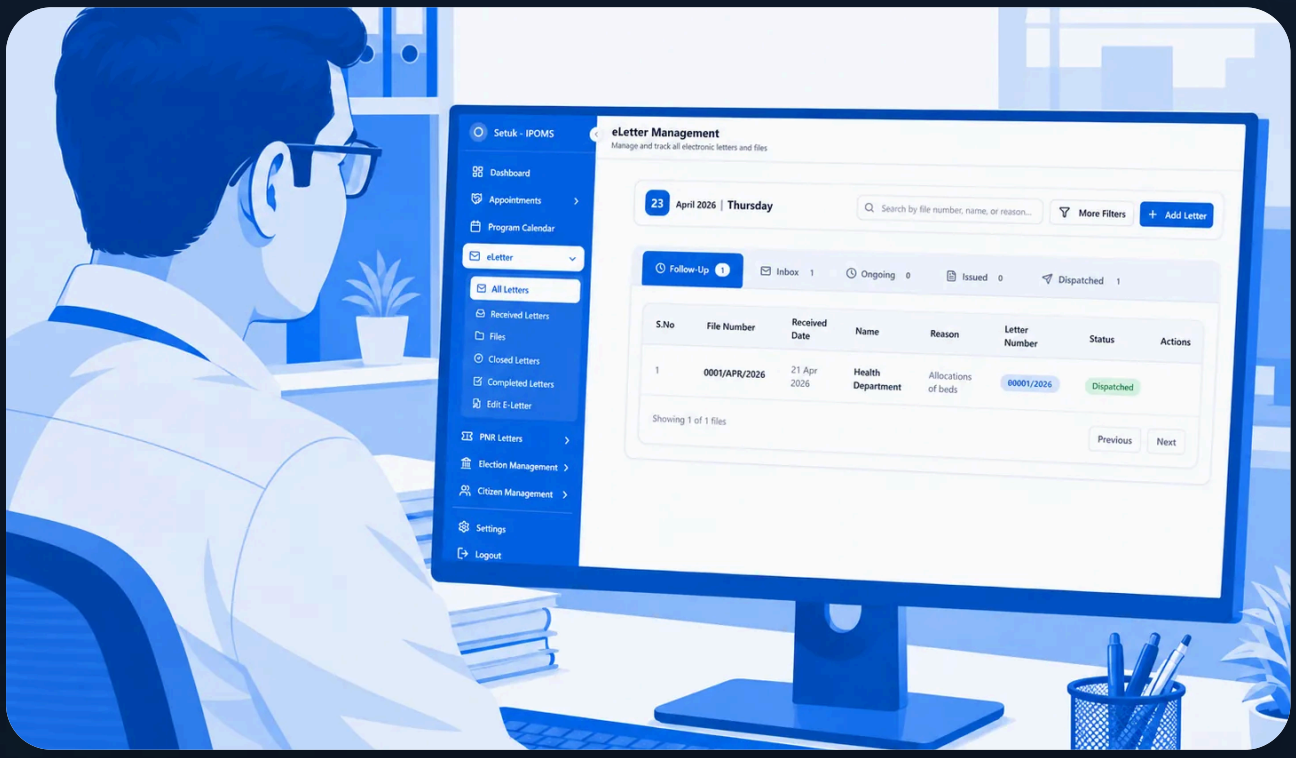

SETUK PVT. LTD.

DRAFT v2.0 · OCTOBER 2026

PROJECT PROPOSAL

AI-Enabled Letter Routing, Tracking & Advisory System

Every letter received by the office registered, routed to the competent officer, tracked against its time limit, and placed before the District Magistrate with options when it stalls.

PREPARED FOR

Office of the District Magistrate

Sheikhpura, Bihar

PREPARED BY

Setuk Pvt. Ltd.

Patliputra, Patna

DOCUMENT

Draft v2.0

October 2026

SECTION 01

1 Introduction and Objective

The Office of the District Magistrate receives a large volume of correspondence from citizens, public representatives and government departments. At present, each communication is examined, forwarded to the concerned department and followed up manually. This results in avoidable delay, difficulty in tracing the status of a communication and limited supervisory visibility.

From files followed up by hand to a single traceable record for every letter.

Setuk Pvt. Ltd. proposes a web-based application through which every letter received by the office is uploaded, interpreted, assigned to the competent officer and tracked until disposal. The system will also place delayed and problematic matters before the District Magistrate, accompanied by a decision-support note setting out possible courses of action.

The objectives of the system are

01 To ensure that every letter received is **registered, assigned and traceable**.

02 To ensure that each letter is **routed to the appropriate officer** without manual triage.

03 To **monitor compliance against prescribed timelines** (SLA) and highlight non-compliance.

04 To **assist the District Magistrate** in deciding the way forward on matters that remain unresolved.

SECTION 02

2 Proposed Workflow

Seven steps take a letter from the receiving desk to disposal. Each step can run with staff approval or, where the office so decides, automatically.

01

Upload

OFFICE STAFF

Authorised office staff upload the scanned or photographed letter, whether handwritten or typed, in Hindi, Punjabi, English or another Indian language.

02

Extraction

OCR + AI

The system extracts the text and the principal particulars of the letter, namely the sender, date, subject, location and the relief sought. It identifies whether the letter is new, or a repeat or revision of an earlier communication and links it to the existing case.

03

Assignment

CONFIRM OR AUTOMATIC

On the basis of the officer directory furnished by the office (name, designation, department, email ID and SLA days), the system identifies the competent officer and records the reasoning. The dealing staff confirm or modify the assignment. Alternatively, the office may set the assignment to automatic, in which case the email is dispatched without staff confirmation.

04

Dispatch

EMAIL

The system sends an email to the assigned officer from the office's designated email address. The email contains the letter, a summary, the due date (SLA days from the date of dispatch) and a unique reference number in the subject line.

05

Receipt of reply

MAPPED BY REFERENCE

The officer replies to the same email, or sends a fresh email or letter quoting the reference number. The system receives the communication, maps it to the case and appends it to the case file.

06

Status determination

AUTOMATIC

Where the reply states that the work is complete, the case is marked ● Solved. Where the reply states that the work cannot be done, the case is marked ● Issue Reported by Department and the reason given is recorded. Where no reply is received within the SLA period, the case is marked ● SLA Failed.

07

Advisory

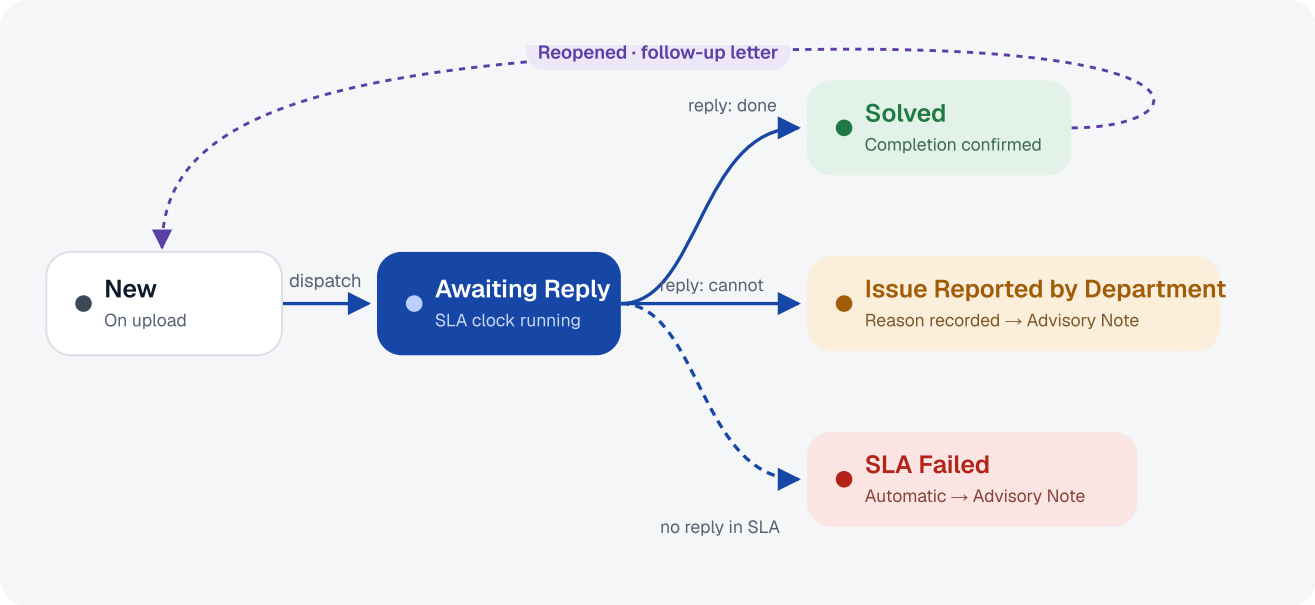

FOR THE DISTRICT MAGISTRATE

For each case marked Issue Reported by Department or SLA Failed, the District Magistrate is presented with the case history, the possible options for resolution and examples of how comparable matters have been resolved elsewhere.

SECTION 03

3 Case Status Model

Every case carries exactly one status at a time. Statuses change on upload, on dispatch, on a mapped reply or on expiry of the SLA period, and each change is logged.

STATUS	MEANING	BASIS OF DETERMINATION
New	Letter uploaded; not yet dispatched	On upload
Awaiting Reply	Email dispatched; SLA period running	On dispatch
Solved	Department confirms completion of work	Reply mapped by reference number; content confirms completion
Issue Reported by Department	Department states that the work cannot be done, with the reason	Reply mapped; content states the impediment, which is recorded as the reason
SLA Failed	SLA period expired without a reply	Automatic; displayed on the dashboard
Reopened	Follow-up or revised letter received from the citizen	Linked to the existing case

SECTION 04

4 Functional Description

4.1 Letter Intake and Optical Character Recognition

- Upload of one or more files, in the form of scans, photographs or PDF files, relating to a single case. The letter and its attachments are saved separately and each attachment remains linked to the case.
- Text extraction from handwritten and printed letters using **Chandra 2.0**, an OCR model, followed by LLM-based structuring of the extracted particulars.
- Side-by-side display of the original image and the extracted text, permitting correction by staff before assignment. This review may be set to automatic, in which case the extracted particulars are accepted without staff review.

4.2 Assignment and Email Dispatch

- The officer directory (name, designation, department, email ID and SLA days) is maintained by the office and may be updated through the application.
- The system proposes an officer; the dealing staff confirm the assignment prior to dispatch. This step may be set to automatic by the office, in which case the email is dispatched on the system's own assignment.
- Outgoing emails follow a standard format and carry the reference number and the due date.

Illustrative dispatch email

From	dm-letters@<office domain>
To	Assigned officer, as per directory
Subject	`[REF-2026-000123]` Letter for action · Due 25 Oct 2026
Body	Summary of the letter, original attached, due date (SLA days from dispatch).

4.3 Reply Tracking and Mapping

- A dedicated office mailbox is monitored continuously.
- Replies are mapped primarily through the reference number. Where no reference number is quoted, mapping is attempted using the sender, the email thread and the content of the letter. **Doubtful matches are placed in a queue for staff verification** and are not mapped automatically.
- All emails, letters and notes relating to a case are maintained in a single chronological case file.

4.4 Dashboard

The dashboard presents three principal views to the District Magistrate:

View 1

Solved Cases

Matters in which the department has confirmed completion, with the reply and any supporting document attached.

View 2

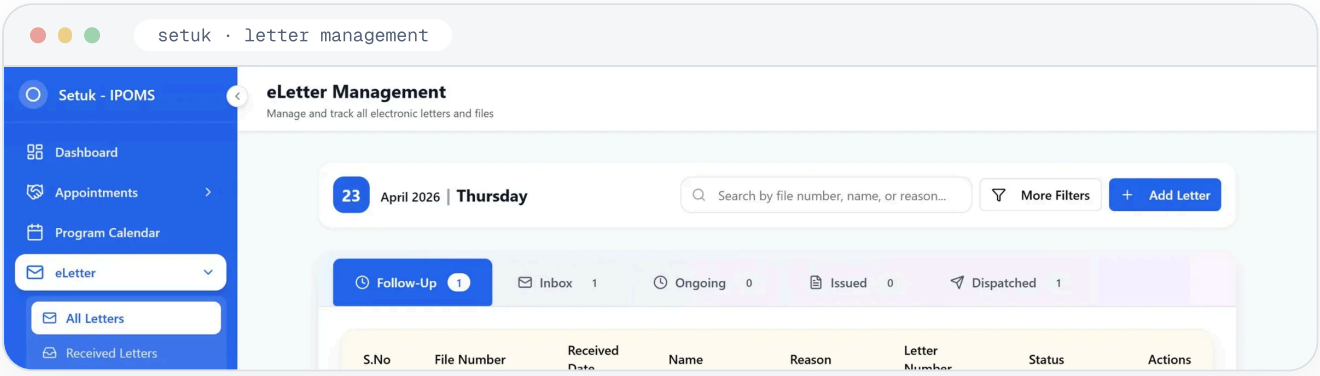

SLA Failed Cases

Matters in which no reply has been received within the prescribed period, in order of delay.

View 3

Issues Reported by Department

Matters in which the department has stated that the work cannot be done, together with the reason given.

Indicative interface from Setuk's existing eLetter module; screens will be adapted to the office's requirements.

- Summary counts of cases by status, with filters for department, officer, date and area.
- Reminders to officers before expiry of the SLA period and escalation upon expiry.

4.5 Advisory Support to the District Magistrate

For each case in the SLA Failed and Issues Reported by Department views, the system will prepare an **Advisory Note** setting out what can be done and what is being done elsewhere in the world on similar issues. The note contains:

A · PROBLEM

A concise statement of the problem and the reason furnished by the department.

B · OPTIONS

Reassignment to another department, escalation to a higher authority, an alternative source of funds, a joint inspection, or a formal reminder.

C · RULES CHECK

A check of each option against the Government Orders, Acts and circulars loaded into the system, with the source cited.

D · PRECEDENTS

How similar issues have been addressed in other districts, States and countries, each with a reference to its source.

Note. The Advisory Note is intended solely to support decision-making. The decision rests with the District Magistrate. Each suggestion will indicate its source and any item that could not be verified will be marked as such. The quality of the advisory depends on the legal and precedent material made available to the system.

SECTION 05

5 Role-Based Access Control

Access to the system will be governed by roles. Each user is assigned one or more roles and may additionally be restricted to specified departments or case categories. Permissions are **enforced at the server level** and not merely hidden on the screen.

ROLE	UPLOAD LETTERS	APPROVE ASSIGNMENT	VIEW ALL CASES	ADVISORY NOTE	ADMIN
System Administrator	–	–	–	–	✓
District Magistrate	✓	✓	✓	✓	–
Supervisory Officer (ADM / SDM)	✓	✓	Own area	✓	–
Dealing Staff / Operator	✓	Propose only	Own entries	–	–
Auditor (read-only)	–	–	✓	✓	–

✓ permitted · – not permitted

DEPARTMENTS

Officers of the departments communicate by email and are not required to hold a login in the first phase. A department-level portal login may be added at a later stage.

ADMINISTRATION

The System Administrator manages users, roles and the officer directory but **cannot view case content**.

SIGN-IN

Secure login with multi-factor authentication and automatic session timeout. Access is withdrawn on the transfer or retirement of a user, for which the office is requested to give Setuk one week's prior intimation.

AUDIT

Every action, including viewing, approval, modification and closure, is recorded in an audit log against the user's identity.

The roles listed above are proposed and will be finalised with the office during the requirements study.

SECTION 06

6 Technology Stack

Established, widely supported components, with the AI layer kept replaceable so the office is not tied to a single model provider.

FRONT END

React

Responsive web interface for staff, supervisory officers and the District Magistrate

BACK END

Node.js

REST APIs, workflow engine, email integration, scheduled SLA checks

DATABASE

MongoDB

Case records, directory, audit log; indexed for search

OCR

Chandra 2.0

Handwritten and printed text; requires GPU-enabled hosting if self-hosted

AI REASONING

Multiple LLMs, such as Claude, ChatGPT and others

Through a service layer maintained by Setuk, used for assignment, status determination and advisory. The model may be selected or replaced without change to the application.

KNOWLEDGE BASE

Vector search over Government Orders, Acts, circulars and past cases

Grounds the advisory in the material supplied by the office

FILE STORAGE

Object storage

Original letters, attachments and generated documents (see Section 7)

EMAIL

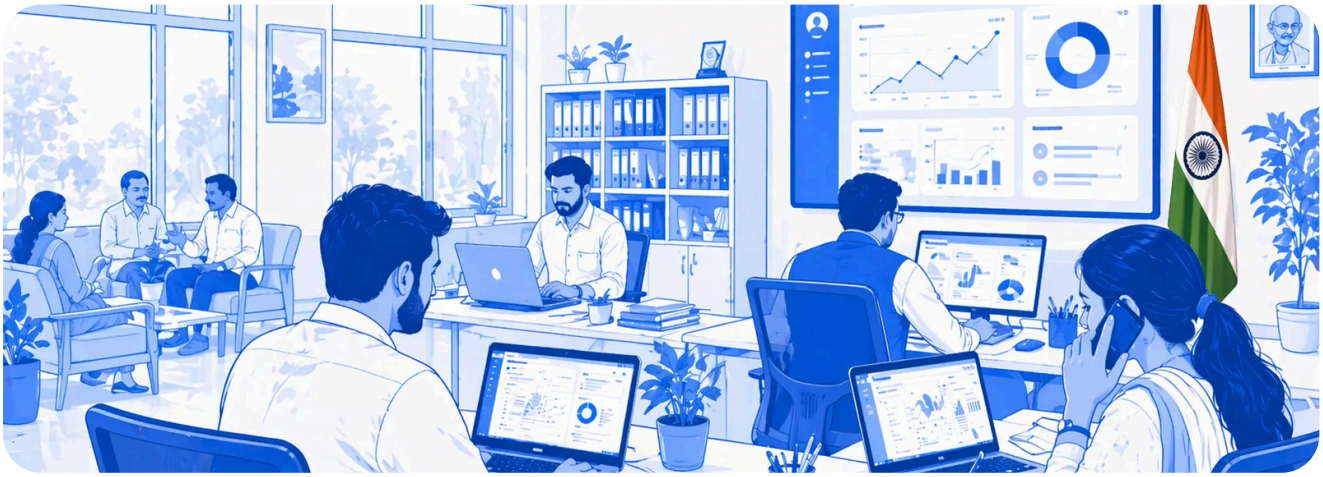

Dedicated mailbox via IMAP / SMTP or the Microsoft 365 / Google Workspace API

Sending, receiving and thread tracking

HOSTING

Cloud infrastructure within India

Data to remain within the country

A responsive interface for the receiving desk, supervisory officers and the District Magistrate alike.

SECTION 07

7 Storage Requirements and Cost

Storage is a recurring cost that grows with the volume of correspondence and the period for which records are retained. It will be charged by the hosting provider on a per-gigabyte, per-month basis and will be shown as a separate line item in the commercial proposal.

7.1 Data to be stored

DATA	DESCRIPTION	STORAGE TYPE
Letters	Scanned images and PDFs of the letters as uploaded; the largest component	Object storage
Case attachments	Documents attached to a case, stored separately from the letter	Object storage
Emails and replies	Outgoing emails and replies received, with any files attached to them	Object storage
Extracted text and case data	OCR text, particulars, status history, directory	MongoDB
Knowledge base index	Embeddings of Government Orders, Acts, circulars and precedents	Vector index
Audit logs	Record of every user and system action	MongoDB / archive
Backups	Periodic copies of database and files, held separately	Backup storage

7.2 Illustrative Estimate

The figures below are illustrative and are intended only to indicate the order of magnitude. They will be revised on the basis of the office's actual daily volume.

100
Letters received per day

3 MB
Average per letter, incl. attachments and replies

~110 GB
Growth per year (~36,500 letters)

~220 GB
Per year including one backup copy

~1.1 TB
Retention of five years

- Retention period and archival policy (for example, moving records older than two years to lower-cost storage) are to be decided by the office.
- If Chandra 2.0 is hosted by Setuk or on cloud GPU servers, the cost of that hosting is separate from storage and will also be itemised.
- Charges for email-sending service and for LLM usage depend on volume and will likewise be itemised.

SECTION 08

8 Security and Oversight

Data will be **encrypted in storage and in transit** and hosted within India.

Personal details such as telephone numbers and addresses may be **masked before text is sent** to an external AI service. The choice of AI provider and its data terms will be agreed with the office.

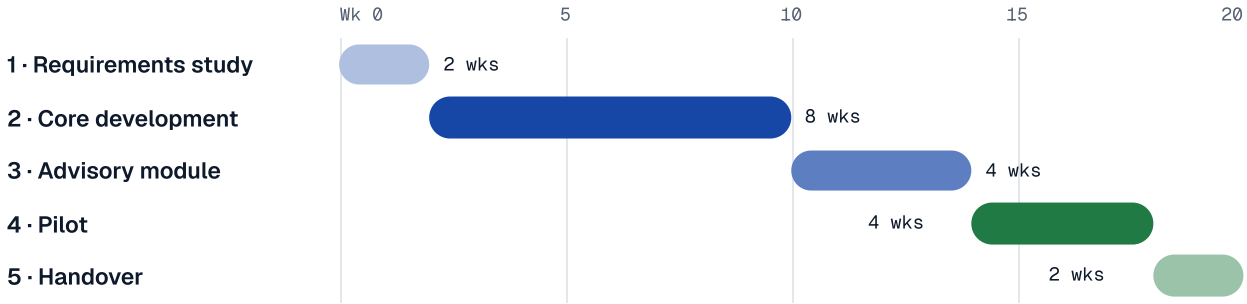

Each of the review, assignment and dispatch steps may be operated **with staff approval or in automatic mode**, as decided by the office. Statuses are open to review and correction by the District Magistrate and authorised staff, and all such changes are logged.

A **complete audit log** will be maintained of the actions of users and the suggestions made by the AI.

SECTION 09

9 Implementation Schedule

Twenty weeks from the start of the requirements study to handover.

PHASE	DELIVERABLES	DURATION
1. Requirements study	Sample letters, officer directory, SLA rules, roles, mailbox access	2 weeks
2. Core development	Upload, OCR, assignment, email dispatch, reply mapping, dashboard, RBAC	8 weeks
3. Advisory module	Knowledge base, Advisory Note, search for comparable examples	4 weeks
4. Pilot	Live use in the office, staff training, accuracy review	4 weeks
5. Handover	Corrections, documentation, support arrangements	2 weeks

The durations are indicative and will be confirmed at the conclusion of Phase 1.

SECTION 10

10 Inputs Required from the Office

01 The officer directory (name, designation, department, email ID and SLA days) in spreadsheet form.

02 Thirty to fifty sample letters of varied types, including handwritten letters.

03 A dedicated email address for the system.

04 Government Orders, Acts and circulars relevant to the advisory knowledge base.

05 A nodal officer to provide approvals and clarifications during the project.

SECTION 11

11 Matters for Confirmation

? Which of the review, assignment and dispatch steps are to be set to automatic from the outset and which only after the pilot.

? Whether the SLA is to be computed in calendar days or working days and whether it varies by department or type of letter.

? Whether a single letter may be assigned to more than one department.

? Whether acknowledgement and status updates are to be sent to the citizen by SMS or email.

? The email platform in use at the office and the expected daily volume of letters.

? Commercial terms, which will be furnished after the scope is finalised.
